description:
Character rig of Barbabe. With 16 poses and 4 animation
cycles included.
Ready for animation.

group:
assets

Free item packaging information

Instructions:

- In the free_items folder place your item.zip, your item.png or gif as a visual representation and your item.txt with the description and group type of your item.

If all three files are found the php script will process and create the item block on the free.html page.

The item will be named from the file name you write your files with, it replaces _ with spaces.

The groups can be added to and found in the svg folder.

PHP is now being execute on out html pages because we added data to the .htaccess file to allow this action.
